

fbfrontend - Phase 8.1

Shared CSS foundation

Complete source files and exact before/after changes

Implemented locally: 7 added source files and 15 updated source files. Backend and FrndBookWC2 are unchanged.

Reusable Button, Card and PageContainer components now serve existing pages. Shared tokens, reset and common styles have clear ownership. Feature classes preserve existing screen geometry and responsive rules.

Verification: production build passed; 7 sidebar tests passed; the existing sidebar browser regression passed. All 33 selected computed-style snapshots match the baseline, with no JavaScript errors during that comparison.

Lint: no errors and the same 13 existing warnings. The existing messageApi dynamic-import build warning remains.

Size: CSS source decreased from 2,505 to 2,366 lines. Built CSS changed from 23.34 to 24.25 kB (gzip 4.66 to 4.75 kB). This foundation improves reuse; it does not yet reduce downloaded CSS.

Reading guide: each file has its full current content, followed by a unified diff. Green + lines are added; red - lines are removed. File headers and @@ markers describe the diff. Line numbers in the left gutter are document aids, not source content. Long lines wrap with a > gutter marker.

The companion Plan and Testing Markdown contains the implementation rationale, file inventory, local checks and remaining phase boundaries. No production deployment was performed.
